Required APIs, Accounts, Data and Sources Checklist

Integrated eBay Order, Inventory, 3PL, Warehouse and Finance Operating Platform

Version 0.1 (Draft for client) | 3 November 2026 | Companion to the PRD and SRS

1. Purpose

This list shows every external API, account, service and data source the platform needs, who must provide it, and by which phase. Please review it and send us the items marked **Client**. API names and scopes must be confirmed against current official eBay documentation before development starts, because eBay changes its APIs over time.

Legend: Priority: **Required** (platform cannot work without it), **Optional** (improves it), **Later** (future phase). Owner: **Client** or **Developer**.

2. eBay Accounts and Access (Phase 1, Required)

#	Item	Why it is needed	Owner	Priority
1	eBay seller account(s) to connect	Source of orders, listings and payouts	Client	Required
2	eBay Developer Program account	Needed to get application keys	Client (or developer on the client's behalf)	Required
3	Application keysets, Sandbox and Production	Identify our application to eBay	Client creates, shares securely	Required
4	OAuth redirect (RuName) and consent for each seller account	Lets the platform act for each seller with the seller's permission	Developer sets up, Client approves	Required
5	eBay marketplace(s) used (for example UK, US, DE)	Sets currency, tax and site rules	Client	Required

#	Item	Why it is needed	Owner	Priority
6	Confirmation of API call limits and whether a higher limit is needed	Order volume may need an approved higher limit	Developer checks, Client approves	Required
7	Agreement to the eBay API License Agreement	Required by eBay for API use	Client	Required

3. eBay APIs Used

All are REST APIs authorized with OAuth. Exact scopes are listed in the final integration design.

eBay API	Used for	Phase	Priority
OAuth and Identity	Authorizing each seller account and refreshing tokens	1	Required
Sell Fulfillment API	Importing orders, buyers, shipping addresses, payment status; later uploading tracking	1 (read), 5 (write-back)	Required
Sell Inventory API	Reading listings and SKUs to map them to internal SKUs; later updating quantities	1	Required
Sell Finances API	Marketplace fees, transactions and payouts for profit and reconciliation	4	Required for finance
Sell Account API	Shipping, payment and return policies used on listings	5	Optional
Notification API	Receiving order events instead of only polling	1 or 5	Optional (needs a public HTTPS endpoint)

eBay API	Used for	Phase	Priority
Sell Feed API	Bulk order or listing reports for large volumes	5	Optional
Taxonomy and Metadata APIs	Categories and item specifics if listing creation is added	Later	Not needed in MVP
Trading API (older XML)	Only for listings that the newer APIs cannot read	As needed	To be confirmed

Please tell us whether your listings were created through eBay's newer inventory tools or the older listing tools. This decides whether the Inventory API can see them all.

The Fulfillment API returns orders that have completed checkout. Pending-payment purchases are not included, which is why the point at which stock is reserved (Decision Q-02) matters.

4. Shipping and Carriers (Phase 5, Optional)

In Phase 1 tracking numbers are typed in manually. Carrier integration is Later.

#	Item	Owner	Priority
1	List of carriers you use (for example Royal Mail, DPD, Evri, DHL, UPS, FedEx)	Client	Later
2	Carrier business accounts and account numbers	Client	Later
3	Carrier API credentials and written permission to use the API	Client	Later
4	Or a shipping aggregator account, if you prefer one connection for several carriers	Client decides	Later
5	Label formats and printers used	Client	Later (label printing is a future item)

5. Hosting and Platform Services (Phase 1, Required)

#	Item	Notes	Owner
1	Hosting provider and region	Region affects data-protection rules (Q-21)	Client decides, Developer sets up
2	Domain name and SSL certificate	For example app.yourcompany.com	Client provides domain
3	Database service with daily backups	Restore must be tested	Developer
4	File storage	Invoice PDFs, attachments, exports	Developer
5	Background job runner	Order imports, nightly reconciliation, billing runs	Developer
6	Secrets storage	eBay tokens and keys, encrypted	Developer
7	Error tracking and monitoring	Alerts when imports or jobs fail	Developer
8	Staging environment	Testing before each release	Developer

6. Email and Notifications

#	Item	Phase	Priority	Owner
1	Sending email service (SMTP or transactional provider)	1	Required for password reset and invoice email	Developer, Client approves cost
2	Sender address and domain records (SPF, DKIM)	1	Required	Client gives DNS access
3	In-app notifications	1	Required	Developer
4	SMS or messaging alerts	Later	Optional	Client decides

7. Finance Sources (Phase 4)

#	Item	Why	Owner	Priority
1	Operating currency and any extra currencies	Ledger and invoices	Client	Required
2	VAT registration details, rates and rules	Invoices and tax reports	Client or accountant	Required
3	Chart of accounts or confirmation to use a standard one	Posting rules	Client or accountant	Required
4	Invoice template: logo, address, terms, bank details	Professional invoices	Client	Required
5	Exchange-rate source, if foreign currency is used	Conversion	Developer proposes	Optional
6	Bank statement CSV format, if reconciliation is wanted	Matching payments	Client	Optional
7	Accounting software name for later export	Future automatic export	Client	Later
8	Payment gateway account	Only if online payment is wanted	Client	Later (not in MVP)

8. Business Data We Need From You

#	Data	Format	Needed by	Owner
1	Product and SKU master list with barcodes, weights, dimensions	Spreadsheet	Phase 1	Client
2	Mapping between eBay listing SKUs and your own SKUs	Spreadsheet	Phase 1	Client
3	Opening stock by SKU and location, with cost	Spreadsheet	Phase 1 start	Client

#	Data	Format	Needed by	Owner
4	Low-stock thresholds and reorder levels	Spreadsheet	Phase 1	Client
5	List of staff users, roles and email addresses	Spreadsheet	Phase 1	Client
6	Approval thresholds for adjustments, purchases, expenses, refunds	Written	Phase 1	Client
7	Supplier list with terms and currency	Spreadsheet	Phase 2	Client
8	Open purchase orders and unpaid supplier invoices	Spreadsheet	Phase 2 and 4	Client
9	Warehouse layout: zones, aisles, bins, and a naming scheme	Document or sketch	Phase 2	Client
10	Return reasons and how returned stock is handled	Written	Phase 2	Client
11	3PL client list, contacts and contracts	Spreadsheet	Phase 3	Client
12	Rate cards for each client: pick, pack, handling, storage	Written or spreadsheet	Phase 3	Client
13	Storage billing basis, billing period, minimum charges	Written	Phase 3	Client
14	Open client invoices and balances	Spreadsheet	Phase 4	Client
15	Cost types that count toward gross profit and net profit	Written	Phase 4	Client
16	Expected volumes: orders per day, SKUs, users, clients	Written	Before design freeze	Client

9. Legal and Compliance

#	Item	Owner
1	Data-protection position (for example GDPR) and retention periods	Client with legal advice
2	Privacy notice covering buyer data imported from eBay	Client
3	Data processing agreement with the developer and with hosting providers	Client and Developer
4	eBay API License Agreement and any marketplace data-use restrictions	Client
5	Written confirmation of audit-log and financial-record retention	Client

10. Not Required for the First Release

Other marketplaces (Amazon, Shopify and so on), barcode scanners and label printers, payment gateway, automatic accounting sync, native mobile app, AI forecasting, Marketing and Promoted Listings APIs.

11. Summary by Phase

Phase	Must be ready before start
1	eBay developer account and keys, seller consent, hosting and domain, email service, SKU list and mapping, opening stock, user list
2	Supplier data, warehouse layout, return handling rules
3	3PL client list, rate cards, storage billing rules
4	VAT and currency rules, invoice template, cost model, eBay Finances API access

Phase	Must be ready before start
5	Carrier accounts and API terms, notification channel decision, write-back decision

12. Please Confirm

Item	Your answer
eBay marketplace(s)	
Number of eBay seller accounts	
Listings created with inventory tools or older tools	
Preferred hosting region	
Carriers in use	
Contact person for eBay account access
